Trishala Gosar

UX Design at Samsung (SRI-Delhi) | Game designer
Noida, Uttar Pradesh, India

Summary

I'm a UX Designer at Samsung with ~2 years of experience designing complex, scalable digital products across smart devices and services. My work spans GenAI-powered customer experiences, AI-assisted learning tools for smart boards, in-house knowledge and skill management platforms, and service configuration portals for TV ecosystems. Currently, I'm exploring UX within the evolving space of smart appliances.

What defines my approach is the ability to connect systems thinking with user-centered design—building experiences that are not only intuitive but also aligned with business and technological realities.

With a foundation in game design, I bring a strong understanding of engagement, feedback loops, and behavioral design into my work. This perspective is further reinforced through my involvement with the IGDC Game Awards (2023 & 2024), where I collaborated with academic institutions and represented the student community—bridging industry and emerging talent.

I'm particularly interested in crafting products that combine AI, interaction design, and meaningful user engagement at scale.

Always open to thoughtful conversations around design, games, and emerging tech.
